YOGANANTH R

Cloud Engineer | AWS | GCP | Python | AI
yogananthr22@gmail.com | +91 7395846642 | Portfolio | Linkedin | GitHub

PROFESSIONAL SUMMARY

Cloud Engineer with 3+ years of experience in AWS and GCP, specializing in cloud infrastructure and automation. Proficient in Python-based automation, cloud-native automation, Linux and Windows administration, AI-based workflows and cloud technologies. Experienced with DevSecOps tools and practices, with a focus on building secure, scalable, and automated cloud environments.

TECHNICAL SKILLS

Cloud & Automation: AWS, GCP, Python, Bash, PowerShell, N8N, Stackstorm
DevOps & IaC: Terraform, Ansible, Git, DevSecOps Tools
Infrastructure, AI & Monitoring: Linux, Windows, CloudWatch, Dynatrace, Grafana, Ollama, Bedrock

EXPERIENCE

Deloitte India | Cloud Engineer
November 2023 - Present
3+ Years | AWS | GCP | Python | DevOps | Automation | AI

- Managed day-to-day AWS and GCP infrastructure operations, troubleshooting, and P1/P2 incident resolution, performing root-cause analysis and restoring critical cloud services within defined SLAs.
- Engineered AWS and GCP cloud automation solutions using Python, Boto3, AWS Lambda, SSM, and CloudShell, automating infrastructure provisioning, AMI and snapshot lifecycle management, disk expansion, agent installation, health and inventory reporting, backups, cost reporting and anomaly detection, security-group and firewall rule optimization, scheduled-event notifications, and load-balancer rule provisioning.
- Developed and implemented GCP snapshot lifecycle automation after identifying a storage-cost issue, reducing unnecessary snapshot usage and delivering around $1,000/month in cost savings when an out-of-the-box solution was unavailable.
- Performed AWS cost and network analysis, using packet captures and log analysis to identify IPs, endpoints, and unnecessary NAT Gateway traffic, resulting in approximately $100K in infrastructure cost savings.
- Automated SUSE Linux OS patching using AWS Systems Manager and SSM Documents, reducing execution time from ~2 hours to ~10 minutes per server.
- Automated Oracle WebLogic patching across 50+ servers using SaltStack, streamlining middleware maintenance, reducing manual intervention, and improving consistency across environments.
- Built cloud observability and reporting solutions by integrating AWS, GCP, Dynatrace, Lambda, and Athena, implementing custom metrics and dashboards, automated health reports, log analysis, and infrastructure monitoring workflows.
- Designed and developed internal Python-based cloud engineering tools, including an ITSM platform and ServiceNow incident-audit and ticket-analysis solutions to identify recurring patterns, and automate cloud engineering workflows.
- Integrated AWS Bedrock Agents and chatbot-driven workflows with cloud automation capabilities, enabling users to trigger cloud tasks through conversational interfaces while leveraging AWS services such as Lambda, SSM, and Boto3.
- Deployed cloud operations workflows using n8n workflows and agents incorporating AI models for decision making and better human readability.

EDUCATION

B.E. Computer Science & Engineering — Anna University
2019–2023 | CGPA: 9.17

CERTIFICATIONS

- Google Associate Cloud Engineer Certification
- Google Cloud Digital Leader Certification
- Oracle Cloud Infrastructure 2025 Certified Foundations Associate
- ITIL 4 Foundation
